

QUIKWASH SYSTEM

Dramatically improve wash-up performance and cut wash-up times and solvent consumption by up to 50% with our QuikWash System. The custom-designed aluminum clamp attaches to your existing wash-up tray and uses our exclusive TruPoint™ DeltaFlex plastic wash-up blade. DeltaFlex is able to achieve and maintain a fine contact point to optimize the blade's wiping performance across the entire length of the oscillating roller. DeltaFlex blades also provide extended blade life and resistance to harsh solvents. Install our QuikWash System today to improve wash-up times, keep rollers running longer and save money.

- > Reduce wash-up times by up to 50%
- > Lower solvent consumption
- > Effectively clean UV and other harsh solvents
- > Clean oscillating roller uniformly
- > Eliminate tack caused by rubber tip blades
- > Extend blade and roller life
- > Reduce blade costs
- > Simplify blade changes
- > System mounts to existing wash-up tray

"Since installing the QuikWash System, our wash-up times have been reduced to less than two minutes and the quality of the wash-up is far superior to that of a traditional rubber blade."

George Saba, Pressroom Manager
Everett Graphics
